

Jaygovindhan Neelanarayanan

Game Developer · AI Tooling · Product Engineering

London, UK | jaygoneelz@gmail.com | +44 7413 449550 | jaygoneelz.github.io | linkedin.com/in/jaygovindhan-n-840aab147 | github.com/jaygoneelz

PROFESSIONAL SUMMARY

Game developer with three-plus years of commercial mobile experience, including design work and NFT-economy architecture for a title that passed one million downloads. Now expanding into general engineering across C++, Unity, VR, and full-stack web development: a from-scratch physics-driven platformer in C++, plus a reusable Unity combat framework and a self-built Progressive Web App with real-world map routing. Completing an MSc in Computer Games Technology with VR at City St George's, University of London, and uses AI coding tools, Claude Code and Copilot, daily.

KEY SKILLS

- **Languages:** C/C++ (C++17), C#, Python, JavaScript, TypeScript
- **Game Development:** Unity 6 (URP, Render Graph API), Unreal Engine 4/5, MonoGame/XNA, OpenGL/GLSL, Cinemachine, VR development (Meta Quest 2)
- **Systems & Architecture:** FSM design, event-driven and observer systems, ScriptableObject architecture, service locator pattern, object pooling, data-driven JSON configuration
- **Web & PWA:** Progressive Web Apps, service workers, Leaflet.js, OSRM routing API, WebAudio API, localStorage persistence
- **Monetisation & Testing:** IAP system design, NFT and token economy design, A/B test-informed iteration, unit and integration testing
- **Tools:** Git and GitHub, Visual Studio, Bullet Physics, FMOD Core, Assimp, Autodesk Maya, Blender 3D, Adobe Creative Suite, ImGui, TextMesh Pro
- **AI Tools:** Daily use of Claude Code and Copilot for code generation, debugging, and review
- **Languages Spoken:** English (Native), Tamil (Native), Hindi (Limited Working), Arabic, French, Portuguese (Elementary)

WORK EXPERIENCE

Computer Games Designer | ALPHA2 Solutions & Software Limited (Freelance, Hourly)

Jul 2026 – Present | London

- Delivered game design work across multiple concurrent client projects, measured by consistent hourly engagement since Jul 2026, by scoping and adapting each engagement to the itinerary and brief supplied per project.

Developer & Technical Artist | OFGA Multimedia

Nov 2022 – Aug 2024 | Remote

- Shipped a commercial mobile title (THE DOT) to Android and iOS, measured by sustained post-launch operational stability, by contributing to game logic, performance-critical rendering systems, and asset pipelines within a live production codebase.
- Broadened technical range across a multi-discipline studio, measured by direct exposure to games, web, mobile app, and AI-integration projects, by contributing development and technical art support across the studio's wider portfolio.

Game Designer | ChennaiGames Studio

Jun 2021 – Oct 2022 | Chennai, India

- Led design on two commercial mobile titles (RADDX Racing Metaverse, Hurley Super Surfer), measured by RADDX surpassing 1M+ downloads, by owning game design documentation, monetisation mechanics, and product architecture across both titles.
- Designed RADDX's blockchain-based NFT vehicle economy and progression loop, measured by a 30,103-car supply across a 6-tier rarity system feeding a 30-level upgrade path, by architecting a dual-currency system (RC and JT Points) and a position-based blueprint-card drop-rate curve.
- Contributed art, asset, and world design across two further titles, measured by MR RACER's 1M+ downloads and 4.2-star rating and a full playable environment and character set for the unreleased POR battle royale, by producing car, environment, level map, and character assets.
- Improved monetisation and delivery, measured by IAP systems and offer structures implemented by engineering teams under tight commercial release cycles, by designing progression-linked offer structures and coordinating delivery across programmers, artists, and QA.

PROJECTS

Accessibility UI Tester | Unity Editor Extension

2025 – 2026 | MSc Individual Project, City St George's

- Built a Unity 6 Editor extension for real-time colour-accessibility testing, measured by a live CVD shader verified to a colour deviation of 0.0000 running at approximately 420fps, by implementing a custom URP shader and a live WCAG 2.1 contrast checker.
- Validated detection accuracy through an independent evaluation, measured by a Precision of 0.92, Recall of 1.00, and F1 of 0.96 against two independently-developed Unity games, by building a labelled ground-truth benchmark and publishing an MIT-licensed package with a full test suite.

Forklift | Food Delivery Idle Game

2026 | Independent Game Development

- Built a full browser-based idle game from scratch, measured by a self-contained file of about 7,000 lines of HTML with zero external frameworks, 28 restaurants, and 284 menu items, by implementing a dual-currency economy, real-world delivery routing via Leaflet.js and the OSRM API, and PWA packaging for Play Store distribution.

Action Combat Framework | Unity Gameplay Programming Portfolio

2026 | Personal Project

- Architected a reusable combat framework for Unity, measured by a full combo, dodge, and block combat kit and enemy AI sharing the same FSM, by implementing a data-driven hitbox/hurtbox damage system and three custom Editor tools including a state-machine debugger.

Drive Circuit | OpenGL Racing Game

2024 – 2025 | INM376 Computer Graphics, City St George's

- Built a real-time 3D racing game in C++ and OpenGL, measured by a fully closed circuit with 4 camera modes and 3 custom GLSL effects, by generating a Catmull-Rom spline track and a complete gameplay loop with lap timing and collision-based pickups.

Other academic and personal projects: 8-Bit Bounce (C++/OpenGL 3D platformer with Bullet physics and FMOD audio), Side Scroller Shooter (C#/MonoGame 2D shooter with JSON-driven difficulty scaling), The Ark: Core Breach (Unity first-person sci-fi prototype), and Lost in Trafalgar (VR puzzle design for Meta Quest 2, INM717 Experiencing the Unknown).

ADDITIONAL WORK EXPERIENCE

Team Member | The Salad Project

Jul 2026 – Present | London

- Maintained food hygiene and allergen compliance standards during high-volume, physically demanding shifts, preparing fresh salads to order and running the till across a fast-paced front and back of house team.

Sales Assistant | The Salad Kitchen

Mar 2026 – Jun 2026 | London

- Delivered fresh, made-to-order salad bowls daily and independently ran an outdoor market stall, handling full setup, service, and proactive upselling.

Barista and Waiter | UBA Shoreditch

Aug 2025 – Nov 2025 | London

- Delivered full table service across high-volume shifts and supported bar and kitchen coordination, taking orders, upselling, and preparing espresso and drinks.

EDUCATION

MSc Computer Games Technology with VR | City St George's, University of London

2024 – 2026 (Expected) | London

BSc Media Technology (Game Design Specialisation) | ICAT College of Design & Media

2018 – 2021 | Chennai, India

CERTIFICATIONS

Microsoft Security Essentials Professional Certificate, Microsoft and LinkedIn (2025); Introduction to AI Governance and Ethics in the Age of Generative AI, LinkedIn Learning; Unity 3D 2021 Essential Training, LinkedIn Learning; Game Design and Development 1: 2D Shooter, Michigan State University (2024); Food Hygiene (Level 2), Allergy Awareness, Manual Handling, First Aid at Work, Fire Safety.
